### **Spring-Summer Roebuck hunting in Hungary and Romania 2021-22**

**4 night / 3 days Exclusive Roebuck Package**  
(Includes **4 Representative** and **1 Gold Medal** buck)

#### **Highlights**

While in most countries spring and summer are off-hunting seasons, Hungary and Romania offer enjoyable Roe Buck hunting during these months too.

Hungary and Romania are the two most famous places for their excellent habitat, sustainable wild game management practices, world-class trophies, and the most successful Roe buck hunts on the best free-range grounds in the Central-European region.

We offer this package for those who would like to fully enjoy the spring nature vibes in the most ideal climate and to get the best experience of a Roe Buck hunt, wanting to have one outstanding trophy among the 5.

Roe Buck hunting is the perfectly suitable program for summer family vacation or shorter business trips in Europe.

### **Hunting Season:**

In the early months of the Spring, there are better chances to see higher number of animals, as the vegetation is not thick or high to cover the deer. Due to the solid deer population multiple shooting opportunities may arise daily.

In the middle of summer, the rutting season provides the sophisticated 'stalk and call' hunting method, giving a chance to see the oldest and most elusive mature bucks with a wide variety of antler sizes and formations.

### **Trophy Size:**

The average representative trophies weight 250-300g, and the world-class trophy category is 500+g.

Plain agricultural lands produce larger trophies, while the hilly and forest covered areas, where the hunt is more challenging, have smaller ones.

### **Hunting Areas:**

Our Roe Buck hunts take place in four different subregions in Eastern Hungary and in Transylvania, the Western part of Romania. All of these hunting areas are approximately a 2-3 hour drive from the nearest airport. The terrains are mostly plain and sometimes hilly, with 20-30% covered by forests and 70-80% by agricultural lands. Each of our hunting areas cover approximately 20-50.000 acres.

### **Hunting Methods:**

The hunting areas are easily accessible. During the hunt we use 4x4 pick up trucks for looking for bucks and covering greater areas. You can also hunt from high seats at deer frequented meadows and agricultural fields. This can be combined with spot and stalk techniques.

Adopting to the deer daily habits, we hunt during the morning and afternoon hours. We spend the midday hours with having a hearty lunch and visiting local tourist spots.

Recommended calibers: 7x64, 30.06, 300 WinMag, 8x57,

Expected shooting distance: 80-250 meter

Physical hardness of this hunt: 2-3/10

### **Hunting Upgrades and Combinations:**

The Roe Buck hunting can be combined with Wild Boar, Mouflon, and Red Stag (in September only), please ask for details.
